NEBIUS × NVIDIA GLOBAL AI HACKATHON · BEST APPS & AGENTS TRACK · ISH + CO-FOUNDER

Mentioned (working name)

Customers now ask AI who to hire. Mentioned tells a small business whether AI recommends it, and how to fix it if not.

The problem

People increasingly ask an AI assistant instead of scrolling Google: *"best bakery near me"*, *"plumber open now in Brampton"*. The AI gives **one answer naming 3-5 businesses**. If a business isn't named, it never gets the call. Big brands pay for tools that track this. A café, plumber or dental clinic has no idea where it stands, or why.

How it helps an SME (concrete example)

> **Maria's Bakery, Toronto.** She types in her name, city and "bakery". Two minutes later:
>
> - **Score:** AI mentions her in **3 of 25** customer questions. A competitor appears in 19.
> - **Why:** the competitor lists prices and hours, has an FAQ answering "gluten-free?", and is on 4 local directories Maria isn't.
> - **Fixes, ready to paste:** FAQ text for her site, a better Google Business description, structured data her web person can drop in, a review-request text for her customers, and the 4 directories to claim.
> - **Weekly re-check:** "You now appear in 9 of 25 answers."
>
> She gets something to *do* in an afternoon, not a report she can't act on.

How it works

1. **Ask:** NVIDIA Nemotron Nano writes 25 realistic customer questions.
2. **Search:** Tavily searches the live web for each one, the way AI assistants do.
3. **Answer:** Nemotron Super answers each question from those sources and names businesses.
4. **Diagnose:** Nemotron Ultra compares the business with the winners and explains the gap.
5. **Fix:** it generates paste-ready fixes. A weekly re-scan runs on Nebius Serverless Jobs.

Runs on Nebius Token Factory + Serverless Endpoints. It is a transparent, repeatable panel that shows the sources behind every answer. We do not claim to show ChatGPT's exact answer.

Scope & potential

- **Large market:** almost every local business depends on being found, and AI answers are becoming a front door.
- **Recurring value:** AI answers change, so a monthly monitoring subscription is natural, like SEO tools today.
- **Channel:** marketing agencies and web designers who serve hundreds of SMEs can resell it.
- **Expands to:** multi-location chains, e-commerce products ("best running shoes under $100"), and tracking which fixes actually moved the score.

Honest risks

- Hard to prove it brings revenue. V1 shows visibility, not sales.
- SEO incumbents will add "AI visibility" features. Our edge is SME-simple and fix-first.
- A simulated answer can differ from a real assistant's, so we show sources and confidence.

All ideas, ranked on one scale (/60)

Each scored 1-10 on: Easy to build · Real pain · Easy to explain · Stand-out · Design showcase (good UI matters, 25% of judging) · Fit with Nebius/NVIDIA stack + Tavily bonus.

#	IDEA	WHO IT HELPS	BUILD	PAIN	EXPLAIN	STAND-OUT	DESIGN	STACK	TOTAL
1	**Mentioned (AI visibility)**	**Local SMEs**	**9**	**8**	**10**	**9**	**9**	**10**	**55**
2	Curb Cut (website accessibility fixer)	SME websites, disabled users	8	8	9	8	7	8	48
3	Misconception Map	Teachers	6	8	10	9	8	6	47
4	Shop Brain (owner's know-how → training app)	SMEs with staff turnover	6	8	9	7	9	7	46

13	Grant Scout	Small nonprofits	8	7	8	5	6	8	42

Backup ideas (if we don't go with Mentioned)

Curb Cut: website accessibility fixer — 48 / 60

Point it at a small business website. It finds accessibility failures, fixes the actual code (alt text, labels, contrast), and proves each fix by re-running the audit.

SME angle: small businesses get accessibility legal demand letters and lock out disabled customers. **Strength:** a measurable before/after score, and it matches the Coding track brief exactly. **Weakness:** most crowded track; less visual.

Shop Brain: owner's know-how → staff training app — 46 / 60

The owner talks through "how we open the shop" for 5 minutes. It becomes step-by-step checklists, a quiz for new hires, and answers in the staff member's own language.

SME angle: high staff turnover, and training lives in the owner's head. **Strength:** very visual and human. **Weakness:** needs speech-to-text and more UI; parts feel like a chatbot.

Invoice Watch: catches supplier overcharges — 45 / 60

Snap supplier invoices. It catches price creep, short deliveries and new fees, then drafts the credit request.

SME angle: thin restaurant margins, and nobody checks invoices line by line. **Strength:** clear dollar figure recovered. **Weakness:** reading photos is error-prone; needs real invoices.
